Conversion to HTML

To convert your markdown, simply invoke **pandoc** as follows (if you don't like the output and want to customize it, feel free to do so & let the teachers know so that the templates / styles can be reused by others!):

```
pandoc -o output.html --template=md2html.html input.md
```

To test whether the conversion was successful, you can open the `output.html` file in a web browser and verify that the content is displayed correctly. Make sure to use three backticks (") followed by the language identifier (e.g., `corcpp`) to enclose your code blocks.

```
#include <stdio.h>
```

```
int main(void) {  
    printf("Hello, World!\n");  
    return 0;  
}
```

```
#include <iostream>
```

```
int main() {  
    std::cout << "Hello, World!" << std::endl;  
    return 0;  
}
```
